How to build a website in wordpress step by step- posted on kinja

If you are looking for a complete guide where you can learn how to make a web page with WordPress, then you have certainly come to the right place!

Requirements to create a web page with WordPress
To create a web page with WordPress, it will be necessary to comply with the following requirements:

[Crear pagina WordPress]

You need to have a WordPress domain and server already installed.But firstly, We recommend the use of a local server before getting deeper into this subject. The use of this local server can help you to start performing some few tests.you ca also have a Wordpress domain for 1 year depending on your needs.

Download WordPress from wordpress.org.
Install WordPress on the server. In the article install WordPress y crear pagina wordpress step by step you have all the information so that you can install WordPress from scratch.

Once you have installed WordPress, log in with the user and the password that you indicated in the installation and access the WordPress administration panel.

Thanks
